

SOUMYA SAURAV PATTNAIK

Senior SDET | QA Automation Engineer | Test Architect

+91-8093799704 | soumyasp0050@gmail.com | Bengaluru, India | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Senior SDET / QA Automation Engineer with 5+ years architecting scalable test automation frameworks across web, mobile, and API layers. Expert in Playwright, Selenium, Appium (Android & iOS), Rest Assured, Java, and TestNG, with strong CI/CD delivery using Jenkins, GitHub Actions, Docker, and Git. Experienced in performance testing (JMeter, K6), cloud-based execution (AWS), and observability via Grafana and Kibana. Early adopter of Generative AI and AI-assisted test automation—building LLM-powered tooling for self-healing tests, automated RCA, and intelligent reporting. Quality-first engineer focused on release confidence, defect prevention, and measurable business impact across Agile, SDLC, and STLC.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

UI Automation: Playwright, Selenium WebDriver

Mobile Automation: Appium (Android & iOS), Espresso

API Automation: Rest Assured, Postman, REST / Microservices

Performance Testing: JMeter, K6

Test Frameworks: TestNG, JUnit, Cucumber (BDD)

CI/CD & DevOps: Jenkins, GitHub Actions, Docker, Git

Databases: MySQL, PostgreSQL, MongoDB

Cloud & Monitoring: AWS, Grafana, Kibana, Firebase Crashlytics

AI & Emerging Tech: Generative AI, Prompt Engineering, LLM Testing, AI-assisted Test Automation, OpenAI APIs

Methodologies: Agile / Scrum, Shift-Left Testing, SDLC, STLC

PROFESSIONAL EXPERIENCE

Senior SDET Automation Test Engineer

Dec 2023 – Present

Sportstech Brands Holding GmbH

Bengaluru, India

- Architected a cross-platform mobile automation framework with Appium for native iOS and Android apps, cutting regression cycle time by 40% and enabling reliable releases for 100,000+ active users.
- Built end-to-end API automation suites using Rest Assured and Postman to validate RESTful microservices, reducing API-layer escaped defects and accelerating release sign-off.
- Engineered AI-driven test automation integrated with Firebase Crashlytics and Grafana, lowering Mean Time to Detection (MTTD) by 25% through real-time anomaly analysis.
- Integrated automated suites into Jenkins and GitHub Actions CI/CD pipelines with a shift-left strategy, improving early defect detection; established JMeter load and SLA benchmarks for reliability under peak traffic.

Software Engineer (SDET)

Dec 2022 – Nov 2023

ReshaMandi

Bengaluru, India

- Developed end-to-end UI automation with Playwright and Selenium, expanding test coverage and accelerating execution to help deliver zero critical production defects.
- Led Scrum ceremonies as Scrum Master, coordinating cross-functional engineering, QA, and product teams to ensure predictable Agile delivery.
- Drove root cause analysis across pre-release and production defects, implementing corrective actions that strengthened overall release quality.

QA / Manual Test Engineer

Jul 2019 – Oct 2021

Freelance

Remote

- Executed 300+ manual test cases for healthcare applications, validating critical workflows and achieving a 98% pre-production defect detection rate.
- Authored detailed test plans and defect reports, collaborating with developers to resolve issues before release.

AI & INNOVATION PROJECTS

Sportstech AI Validation Hub — AI-powered centralized quality engineering platform

Tech: Playwright, Selenium, Appium, Rest Assured, JMeter, K6, Jenkins, Docker, OpenAI APIs, Grafana

- Designed a unified execution dashboard consolidating web, mobile, API, and performance suites into a single control plane, eliminating fragmented reporting across teams.
- Integrated Generative AI to auto-generate executive test reports and perform automated root cause analysis (RCA), cutting manual triage effort by ~60%.
- Built a scalable, containerized architecture (Docker + Jenkins) for parallel cross-platform execution and on-demand AI-driven quality insights.

FitBot AI Test Assistant — Intelligent QA assistant for automation intelligence

Tech: Java, OpenAI APIs, Jenkins, Prompt Engineering, Text-to-Speech

- Built an AI assistant that monitors live test execution and delivers voice notifications and automated run summaries, reducing time-to-awareness on failures.
- Implemented LLM-driven root cause analysis and self-healing recommendations, lowering flaky-test investigation time and boosting team productivity.
- Automated end-of-run reporting and distribution, giving stakeholders real-time visibility into quality status.

TokenScope Dashboard — AIOps observability platform for LLM cost optimization

Tech: JavaScript, Node, OpenAI APIs, observability & analytics tooling

- Built an observability dashboard tracking real-time LLM token consumption across models and projects for full cost visibility.
- Implemented usage forecasting and cost analytics, enabling proactive budget control and identifying optimization opportunities.
- Surfaced per-model and per-feature consumption trends to support data-driven AIOps decisions.

EDUCATION

B.Tech, Civil Engineering

Government College of Engineering, Kalahandi
